

# Sprint Planning Report

## Sprint Number & Dates

This is sprint number 3 and it is scheduled to be executed from 12.02.2026 to 27.02.2026.

## Sprint Goal

The goal of this sprint is to get the product to technically complete. This includes implementing and testing the remaining API endpoints, as well as creating the rest of the frontend views and functionalities.

## Selected Product Backlog Items

- Classroom creation
- Flashcard quiz functionality (remaining ones + wiring them with the backend)

## Planned Tasks / Breakdown

We have planned to execute the goals and backlog items by splitting them into 2 parts. Two members will work on the remaining backend logic, and the other two will continue on the frontend side.

## Team Capacity & Assumptions

The whole team is present, healthy and feeling well so by all assumptions we will get each task done in time.

## Definition of Done

- **The product works with its minimal requirements:**
  - User registration and log-in
  - User profile management and promotion requests
  - Flashcard and Quiz creation and storing in the database
  - Classroom creation and management for Teacher role users (adding quizzes and learning materials to a classroom, managing the participants)
- **All core business logic is tested and covered with code coverage tools:**
  - On the backend side, each Service and Controller is tested thoroughly
  - In the frontend, hooks and other possible logic-containing functionality is tested.
